

The SC-V7000 is Epson's first UV large format printer and allows sign and display makers to expand their portfolio of products.

The SC-V7000 offers exceptional image quality and the flexibility to print on a wide range of media. It's been developed for printing eye-catching retail and outdoor signage, window displays, hoarding panels, packaging, promotional goods and décor products. It offers a versatile range of applications, which enables companies to expand their product offering and deliver consistently high-quality results.

High-quality prints

This UV flatbed printer delivers outstanding print quality and vivid colours, as the UltraChrome UV 10-colour inkset enhances prints for stunning results. The white ink provides versatility for printing on a wider range of products – either applied as a base layer on coloured media, or to create versatile backlit prints. Similarly, the varnish offers flexibility, as it can be applied all over the image or as a spot colour to accentuate specific textures and effects.

Productivity

The SC-V7000 enables businesses to print at high speed with a maximum print area of 2.5 metres by 1.25 metres. The printhead layout enables simultaneous high-speed printing, with white ink and varnish, without losing productivity.

Material versatility

Users can print onto a wide range of substrates up to 80mm thick including: acrylics, polycarbonates, PVC, glass, aluminium, metal, polyester, foamboard, styrene, wood and stone. And with the 4-zone vacuum system, it offers real flexibility for production environments.

Usability

The printer automatically adjusts the printhead height depending on the media

Usability

thickness and also includes a crash sensor to avoid potential head crashes. The

Usability

ionizer helps eliminate and reduce the static charge on the media so that ink

KEY FEATURES

- **Outstanding print quality**
